

Anti-CD81 (TAPA1) mAb-ALP

CODE No. MEX003-12

CLONALITY Monoclonal

CLONE A103-10

ISOTYPE Mouse IgG2a κ

QUANTITY 50 µL

SOURCE Purified IgG from hybridoma supernatant

IMMUNOGEN Human prostate carcinoma cell line (PC3) derived exosomes (prepared by ultracentrifugation from cultured supernatant)

FORMULATION 50 mM Tris-HCl, 100 mM NaCl, 1% BSA, 0.1% ProClin150 containing stabilizers.

STORAGE This antibody solution is stable for one year from the date of purchase when stored at 4°C.

APPLICATION-CONFIRMED

Sandwich CLEIA 1:2,000

SPECIES CROSS REACTIVITY on Sandwich CLEIA

Species	Human	Monkey	Mouse	Rat	Hamster
Samples	HT29 cell culture supernatant, serum	Not tested	Not tested	Not tested	Not tested
Reactivity	+				

Entrez Gene ID 975 (Human)

Sandwich CLEIA

- 1) Dilute the capture antibody solution to 5 µg/mL in 0.1 M bicarbonate buffer, pH 9.6.
(The concentration of antibody will depend on the conditions.)
- 2) Coat the microplate-well with 50 µL of capture antibody solution, prepared in above step 1), rock the plate briefly but thoroughly and incubate overnight at 4°C.
- 3) Wash the plate 2 times with PBS containing 0.1% Tween 20.
- 4) Add 250 µL Blocking buffer [Tris-buffered saline (TBS) containing 1% BSA, pH 7.4] to decrease the binding of non-specific proteins. Incubate for 1 hr. at room temperature.
- 5) During step 4), prepare the analyte and/or standard/calibrator to be measured using Blocking buffer or ExoDiluent for Immunoassay (MBL; code no. MEX1001).
- 6) Wash the plate 3 times with PBS containing 0.1% Tween 20.
- 7) Add 50 µL of the analyte and/or standard/calibrator prepared in above step 5) to each well, and rock the plate briefly but thoroughly. Incubate for 1 hr. at room temperature.
- 8) During step 7), prepare the detection antibody solution by diluting Anti-CD81 (TAPA1) mAb-ALP (MEX003-12) to 1:2,000 in Reaction buffer [50 mM HEPES containing 1% BSA, 0.15% Proclin 150, 150 mM NaCl, pH 7.2].
(The concentration of antibody can be changed if desired because the suitable protocol depends on each detection system).
- 9) Wash the plate 5 times with PBS containing 0.1% Tween 20.
- 10) Add 50 µL of detection antibody solution, prepared in above step 8), and rock the plate briefly but thoroughly. Incubate for 1 hr. at room temperature.
- 11) During step 10), prepare the next working solution (ALP substrate).
- 12) Wash the plate 3 times with PBS containing 0.1% Tween 20.
- 13) Wash the plate 2 times with TBS.
- 14) Add 50 µL of working solution (ALP substrate), prepared in above step 11), and rock the plate briefly but thoroughly.
- 15) Incubate for 30 min. at room temperature.
- 16) Measure the chemiluminescence by using a microplate reader.

(Positive controls for Sandwich CLEIA; HT29 cell culture supernatant and human serum)

Sandwich CLEIA for measurement of human CD81 (TAPA1)

Left: HT29 cell culture supernatant

Right: Human serum

Capture Ab: Anti-CD9 mAb (MEX001-3)

Detection Ab: Anti- CD81 (TAPA1) mAb-ALP (MEX003-12)
